WOOD'S CROP SPECIAL

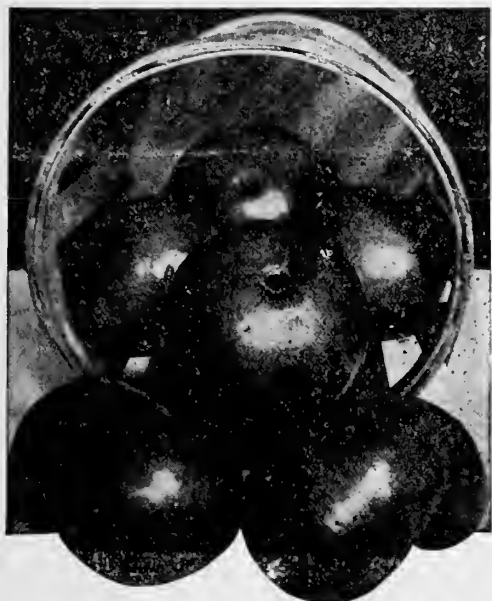

Giving Timely Information and Prices of Seasonable Seeds

PUBLISHED BY T. W. WOOD & SONS SEEDSMEN RICHMOND VA.

VOL. XXVI.

APRIL EDITION

1931

WOOD'S FAMOUS BRIMMER TOMATO
Seven fruits weighed 15¼ pounds

SPRING IS HERE

This is the time when the urge comes to everyone to get out the old spade, dig up mother earth and plant. Nothing gives more satisfaction than when crops begin growing, the garden shows signs of life and everything turns green. It gives us all a different outlook on life and really means "spring is here."

Consider the garden. There is no place on the farm that pays such big dividends as a well planned and well worked garden. More attention should be given this important part of the farm and home. Regular plantings made every month of the year will mean a big saving in supplying your need of good, healthy, fresh vegetables. Follow the urge and

PLANT A GARDEN

EVERYONE WILL PLANT THIS YEAR GARDENS

The lesson derived from the depression has caused us all to realize that food raised at home is a saving. In this **Crop Special** we are listing the most desirable varieties recommended for home gardens. A more complete list of varieties will be found in our new 1931 Spring Catalog, which also contains the Planter's Time Table, which tells when to plant, depth to plant, quantities to sow and other helpful information which will aid you in planning your garden.

FEED CROPS

Growing feed crops for your stock is the second step—as we all know that the farmer who produces sufficient feed for his live stock, regardless of his regular money crops, is usually in fair financial condition. Make your plans now. There are many crops that can be put in to advantage during the next few months that will furnish quick feed at a cheap seeding cost.

SUGGESTED CROPS

— FOR —

April, May and June
Plantings

OATS (Early)
SUDAN GRASS
GERMAN MILLET
COW PEAS
SOJA BEANS
LESPEDEZA
SWEET CLOVER
SORGHUMS
SEED CORN
POTATOES (Early)

Summary of Suggestions for Emergency Hay and Pasture Crops

AS RECOMMENDED BY THE U. S. DEPARTMENT OF AGRICULTURE.

OATS—Spring seeding as early as possible. Rate, 2 to 3 bushels per acre.

For Pasture—Fall or spring seedings should furnish late winter and early spring grazing at rate of one head per acre for 30 days. If oats are wanted for grain, graze 1 head for 3/5 acres. If not for grain or hay they can be grazed more heavily and continuously.

For Hay—Cut in soft dough stage. Probable yield 1 to 2 tons per acre.

Varieties—Burt, Fulghum and Kanota.

SOY BEANS—Seed about or soon after corn-planting time; in drills or broadcast, 1 to 2 bushels; in rows, 1/2 to 1 bushel. With Sudan Grass, 3/4 to 1 bushel of beans with 10 pounds Sudan per acre.

For Pasture—Not well adapted; best for sheep; graze carefully if at all.

For Hay—Cut when weather is favorable and as early as possible when pods are one-third to one-half filled. Probable yield 1.5 to 3 tons per acre.

SUDAN GRASS—Seed on firm seed bed about 10 days after corn-planting time. Short-season hot-weather crop adapted throughout drought area. Rate, drill or broadcast, 20 to 25 pounds per acre; with soy beans, 10 pounds.

For Pasture—Begin grazing when 10 to 16 inches high, which should be about 14 to 21 days after planting. Can be grazed all summer.

For Hay—Cut when it begins heading or soon after. Two cuttings possible, except far North. Probable yield 1 to 3 tons per acre.

SORGO OR SWEET SORGHUM—Seed on well prepared land about two weeks after corn-planting time; 60 to 90 pounds per acre when drilled or broadcast, 6 to 10 pounds when in rows.

For Pasture—Not suitable, danger of poisoning. **For Hay**—Cut when seed is in soft dough stage. Probable yield 2 to 4 tons per acre.

COW PEAS—Advised only south of latitude of St. Louis. Seed when soil is warm. Sown broadcast for hay, use 75 to 120 pounds per acre; drilled, 45 to 60 pounds; in row, 30 to 45 pounds; in each case according to size of seed.

For Pasture—Not best practice, but if necessary turn on when ready to cut for hay. Watch out for bloat.

For Hay—Cut when pods begin to turn. Hard to cure, best use frames. Probable yield 1 to 2 tons per acre.

MILLET—Seed when soil is warm, on well prepared seed bed; 2 to 3 pecks per acre.

For Pasture—Not recommended.

For Hay—Cut just after blooming. Probable yield 1 to 2 tons per acre.

Varieties—German, Hungarian Common or Golden.

LESPEDEZA—Fifteen to twenty-five pounds per acre.

For Pasture—Excellent for summer and fall.

For Hay—Cut Korean in August; others in fall, about October. On good, moist land should make 1 to 2 tons per acre.

Varieties—Common, Tennessee 76, Kobe, Korean.

THE POTATO AS A HEALTH FACTOR

(Excerpts from an article by Dr. John Harvey Kellogg of the Battle Creek Sanitarium, Battle Creek, Mich., and a celebrated diet authority.)

There can be no doubt that the potato, more than any other article of food, is capable of rendering a notable service in conserving and prolonging human life. It is highly important that the public should be informed respecting the supreme dietic value of the potato and instructed in its use. Every adult should eat at least one pound of potatoes daily.

If the American people will eat three times as many potatoes and one quart of milk daily and one-third as much meat, the result will be the addition of two inches or more in height and a notable reduction in the death rate.

More potatoes, more milk, more green vegetables—spinach, lettuce and the like—with bran and fresh fruits to aid elimination; these are the nation's greatest dietetic needs.

Many persons avoid potatoes because of their supposed fattening properties. This popular prejudice has little foundation in scientific fact. The potato, like any other food stuff, is fattening when eaten in a quantity more than sufficient to meet the body needs. The potato is no more fattening than the same amount of bread or any other cereal.

The potato is used in sanitariums as a means of combatting acidosis, kidney stones, Bright's disease, high blood pressure and gout.

There is no other single article of food capable of doing so much for the promotion of the health, longevity and prosperity of the American people as the potato.

WOOD'S Virginia-grown Ensilage Corn

*Outyielding all Other Varieties at
Ten State Experiment Stations*

Last year nine of Wood's Ensilage Corns were tested at the Connecticut, Minnesota, Delaware, New Jersey, Maryland, Pennsylvania, Ohio, Illinois, Vermont and Indiana State Experiment Stations, and produced more ensilage per acre than other varieties. Wood's Ensilage Corns are raised from our own improved strains, field inspected and natural field matured, germinating well over 90 per cent. The ears are carefully hand picked, nubbed, graded and re-graded.

NO CHARGE FOR SACKS.

What is HOME Without a GARDEN?

Every home should have a garden plot. Vegetables picked and eaten from your garden have that delicious freshness that is often lost when vegetables stand several days in the markets. Many consider the vegetable garden the most valuable part of the home grounds.

PLANT A GARDEN

PLANT WOOD'S TESTED SEEDS

FOR BEST RESULTS

BUSH OR SNAP BEANS

will plant a sixty foot row.

Plant as soon as ground is warm and every two weeks thereafter until the middle of August for a continuous supply. One pound
